# AVL VSAT FLYAWAY ANTENNA

## WHEN EVERY MINUTE MATTERS

The 750K Mobile VSAT broadband antenna provides secure two-way, real time, IP and data communication on Ku band. This antenna can be deployed by one person in less than 15 minutes.

The unmatched performance and reliability of the AvL fully motorized positioners employing the zero backlash AvL Cable Drive system guarantee optimum pointing accuracy and pointing stability.

The one button auto acquisition controller locates and precisely aligns the antenna in all three axes to the required satellite.
