

# VEHICLE-INTEGRATED DRONE

- + **Rapid-deploy UAS with multiple power sources**
- + **Integrates seamlessly with command vehicle**
- + **Versatile payload configuration options**
- + **Remains operational for extended periods**

## THE MULTI-SERVICE UAS PLATFORM

The Nomad GCS Vehicle-Integrated Drone System is a real dynamic duo, offering fast deployment, ease of operation, and unmatched command and control versatility. The system supports a broad spectrum of assignments, from surveillance and security, to search and rescue, inspection, weather monitoring, mapping, and more. The vehicle platform brings off-pavement, off-grid capabilities, and the UAS can be configured to carry a variety of equipment and accept power from grid, battery, solar, or generator. Pilot and monitor drones from the secure, climate-controlled shelter. Stream high-definition optical or infrared feeds to the truck and transmit them to remote locations. Whatever your mission, Nomad elevates UAS operations to soaring new heights.

**Let's build something great together.**
