

DISCREET ON-THE-MOVE SATELLITE

- + On-the-move, discreet satellite connectivity
- + Maintains broadband-speed signal at 105+ mph (169 kph)
- + Hidden, floor-embedded electronics controls
- + Designed for integration into common SUV and other vehicle platforms

REVOLUTIONARY HIGH-THROUGHPUT CONNECTIVITY FOR THE ROAD

The fast, flat-panel KyWay™ satellite terminal from Kymeta changed the shape of mobile connectivity. Now, that groundbreaking technology has been engineered for seamless integration by Nomad into popular Sport Utility Vehicle (SUV) platforms. On-the-move satellite just got a lot more streamlined.

Whether for government, commercial or private use, the Nomad-Kymeta vehicle integration is the unparalleled solution for flexibility, reliability, and ease of use. The system is engineered to provide high-throughput bandwidth with extraordinary data security. When access to cellular networks is permitted, Nomad's proprietary *Intelligent Routing* technology can provide failover capabilities, switching seamlessly between cell, satellite, and (when stationary) terrestrial connections.

Let's build something great together.
