

TACTICAL MESH NETWORK

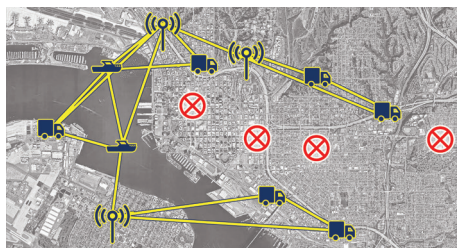

- + **Self-healing network for adaptability to changing mission conditions**
- + **High-throughput data speed where you need it**
- + **Connectivity improves with more users**

BUILD CONNECTIVITY ON THE FLY

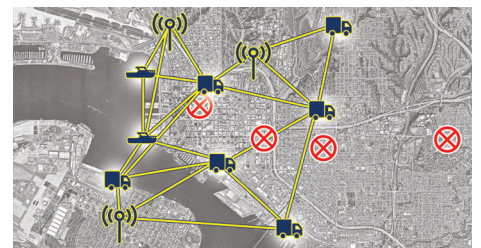

Whatever your mission, it's not hard to imagine scenarios where connectivity is limited or lost, crippling critical communications and surveillance feeds. Nomad's Tactical Mesh Network removes all worry, operating independently of the cellular network, and creating a fully mobile and scalable system of nodes. With no single point of failure, the Nomad Tactical Mesh Network is self-healing. And unlike other technologies, it actually becomes stronger when more users join, encouraging inter-agency cooperation and enabling important economies of scale. Achieve high-throughput bandwidth and network resiliency... *When Every Minute Matters.*

Mobile and infrastructure nodes work together to create a flexible, scalable network

When nodes go down, Nomad Tactical Mesh's capacity to self-heal is indispensable

Mobile assets can be repositioned to restore mission-critical connectivity
