

# CONNECTED FLEET SOLUTIONS

## ABOUT NOMAD

Since 2002, Nomad GCS has designed and manufactured Connected Mobile Operations Centers (CMOCs) for fleets executing the world's most critical missions. Commercial and public sector customers who demand uncompromising connectivity and operational uptime trust Nomad to deliver. Our full-line production brings self-contained engineering, manufacturing, technology integration, and support under one umbrella for a frictionless customer experience. And, our mission-driven approach tailors solutions to your unique requirements. Learn more at:

"The solutions are incredibly capable and flexible. We can't afford communications lapses in the field, and Nomad not only gives networking peace of mind, but also lets us operate more efficiently."

**TIM FITZGERALD**  
FLEET ADMINISTRATOR (FMR.), DC WATER

## SELECT CUSTOMERS

## THE CHALLENGES

In modern fleet operations, every minute matters. Too often, organizations are losing precious time to inferior communications and data solutions. They experience further frustration and risk due to systems complexity and convoluted (or non-existent) support.

- **Comms and Data:** Fleet inconsistencies, switching and reconnection delays
- **Systems Complexity:** Disparate components, complicated billing
- **Support:** Inability to troubleshoot, unresponsive or segregated tech support

## NOMAD RESPONSES

From defense and public safety, to utility and telco, organizations needing robust, reliable comms, total systems integration, and single-point support call on Nomad. Our future-ready Fleet Connectivity Solutions offer performance, flexibility, and simplicity unmatched in the industry. We solve the challenges of today, and enable easy adaptation for tomorrow.

- **Intelligent Connectivity:** NTC-managed, blended satellite and cell connections
- **Nomad Total Command (NTC):** Intuitive asset management interface
- **Nomad Portal:** A single pane of glass for maintenance, support, and billing

## BLENDED CONNECTIVITY

"Failover" solutions only use one connection at a time and "load balancing" solutions terminate the session if a connection fails. *Nomad Blended Connectivity* taps all cell and multiple sat channels at once, aggregating bandwidth and optimizing the connection automatically, many times per second.

- Create a resilient "network of networks"
- Maintain session persistence
- High-bandwidth connectivity anywhere

## SAMPLE SOLUTION

- 6-Channel Multi-Carrier Cell
- Flat-Panel LEO Satellite Terminal
- NTC and Portal Software
- Warranty + Support Package
