

GOOSENECK + KINGPIN TRAILERS

- + **Spacious form factors from 34' to 53' in length**
- + **Two- and three-axle platforms with gooseneck or kingpin towing**
- + **Deploys easily by anyone, with minimal training**
- + **Floor plan, slideout, and technology options to suit any mission profile**

MORE SPACE, LESS COMPLEXITY

Space can only be purchased once, so maximize your investment with a Connected Mobile Operations Center (CMOC) that serves today and expands for tomorrow. Nomad's Responder and Responder Kingpin trailers provide abundant, customizable workspace supported by full systems integration: connectivity, power generation, and climate control.

Available in lengths up to 34 feet (Responder) and 53 feet (Responder Kingpin), these gooseneck and fifth-wheel platforms deliver unmatched scale at a lower cost and complexity than motorized chassis. On deployment, they can remain in place for extended operations without the maintenance demands of powered equipment.

Available Nomad Total Command™ (NTC) automation ensures even the largest Responder trailers can be deployed, operated, and stowed by a single team member with minimal training. Add innovations like AlwaysUp™ connectivity and NeverDown™ power management for maximum uptime in the field.

Maximum capabilities, minimal maintenance and overhead.
