

LOGAN HEALTH

MOBILE HEALTH + SERVICES VEHICLES

MISSION // Logan Health serves 700,000 residents across 20 counties and 50,000 square miles in Montana and Wyoming—much of it rural or remote. Schools in these areas face challenges with healthcare access. The customer needed a secure, connected mobile solution to bridge the gap between providers and patients.

SOLUTION // Nomad designed, manufactured, and integrated a 24-foot Mobile School Health Services Clinic (MSHSC) that brings services directly to those in need. The clinic features dual-cell connectivity that synchs the vehicle with Logan's other assets. With a patient intake area, exam room, lavatory, HVAC, refrigeration, and full AV package for telehealth, the MSHSC functions like a modern in-school clinic. Healthcare professionals can perform sports physicals, provide acute and preventive care, assist with chronic conditions, and care for student and faculty mental health.

FEATURES //
